

- 1 Sample X is added to water and made up to a total volume of  $200\text{ cm}^3$ . This gives a solution of  $0.100\text{ mol dm}^{-3}\text{ HCl}$ .

What is X?

- A  $10\text{ cm}^3$  of  $1.00\text{ mol dm}^{-3}\text{ HCl}$
- B  $30\text{ cm}^3$  of  $0.90\text{ mol dm}^{-3}\text{ HCl}$
- C  $50\text{ cm}^3$  of  $0.40\text{ mol dm}^{-3}\text{ HCl}$
- D  $100\text{ cm}^3$  of  $0.30\text{ mol dm}^{-3}\text{ HCl}$

- 2 A mixture of  $10\text{ cm}^3$  of methane and  $10\text{ cm}^3$  of ethane was sparked with an excess of oxygen. After cooling, the residual gas was passed through aqueous potassium hydroxide.

All gas volumes were measured at the same temperature and pressure.

Which volume of gas was absorbed by the alkali?

- A  $15\text{ cm}^3$                       B  $20\text{ cm}^3$                       C  $30\text{ cm}^3$                       D  $40\text{ cm}^3$

- 3 Z is a compound of two elements, X and Y.

Element X shows a very large increase between its 5th and 6th ionisation energies. It has the second largest 1st ionisation energy in its group.

Element Y shows a very large increase between its 6th and 7th ionisation energies. It has the largest 1st ionisation energy in its group.

What is compound Z?

- A  $\text{NO}_2$                       B  $\text{PCl}_5$                       C  $\text{P}_4\text{O}_{10}$                       D  $\text{SF}_6$

- 4 Which statement about  $^{131}_{53}\text{I}$  is correct?

- A A negative ion of  $^{131}_{53}\text{I}$  contains 53 neutrons and 52 electrons.
- B A negative ion of  $^{131}_{53}\text{I}$  contains 53 neutrons and 54 electrons.
- C A negative ion of  $^{131}_{53}\text{I}$  contains 78 neutrons and 52 electrons.
- D A negative ion of  $^{131}_{53}\text{I}$  contains 78 neutrons and 54 electrons.

**34** X is a non-cyclic ketone with a single carbonyl group and no other functional groups. Ketone X has the following properties.

- When ketone X is treated with  $\text{NaBH}_4$ , the organic product has a  $M_r$  2.3256% greater than the  $M_r$  of ketone X.
- Ketone X gives a yellow precipitate with alkaline  $\text{I}_2(\text{aq})$ .

How many isomeric ketones could be ketone X?

**A** 1                      **B** 2                      **C** 3                      **D** 4

**35** Compound Y:

- changes the colour of acidified  $\text{K}_2\text{Cr}_2\text{O}_7$  from orange to green
- has no effect on Fehling's reagent
- produces an orange precipitate with 2,4-dinitrophenylhydrazine reagent.

What is compound Y?

**A**

**B**

**C**

**D**

**36** The product of the reaction between propanone and hydrogen cyanide is hydrolysed under acidic conditions.

What is the formula of the final product?

**37** P is a carboxylic acid with molecular formula  $C_5H_{10}O_2$ .

Carboxylic acid P reacts with an excess of  $LiAlH_4$  to form compound Q.

Which pairs of molecules could be carboxylic acid P and compound Q?

	carboxylic acid P	compound Q
1	$CH_3(CH_2)_3COOH$	$CH_3(CH_2)_3OH$
2	$CH_3(CH_2)_3COOH$	$CH_3(CH_2)_3CHO$
3	$(CH_3)_3CCOOH$	$(CH_3)_3CCH_2OH$

**A** 1 and 2

**B** 1 and 3

**C** 2 and 3

**D** 3 only

**38** Compound X is treated with an excess of dilute aqueous potassium hydroxide.

What is the structure of the organic product?

**39** A section showing two repeat units of an addition polymer is shown.

What is the identity of the monomer that produced this polymer?

- A** 2-chloro-3-methylbutane
- B** 2-chloro-3-methylbut-2-ene
- C** 2-chloropent-2-ene
- D** 2,4-dichloro-3,3,4,5-tetramethylhexane

**40** The relative atomic mass of antimony is 121.76.

Antimony has **two** isotopes. The mass numbers of the two isotopes differ by two. The isotope with the lower mass number is the more abundant.

What is the percentage abundance of the isotope with the **higher** mass number?

- A** 12%
- B** 38%
- C** 62%
- D** 88%

40 Measles is an infectious disease caused by a virus.

The graph shows the number of cases of measles each year in a country before and after a vaccine was introduced.

What could have caused the decrease in the number of cases of measles after vaccination was introduced?

	vaccines provided artificial active immunity in people	vaccines provided artificial passive immunity in people	fewer people are able to act as hosts for the virus
A	✓	✗	✓
B	✗	✓	✓
C	✗	✓	✗
D	✓	✗	✗

key  
✓ = yes  
✗ = no

- 8 The graph shows the boiling points of the hydrogen compounds of Group 16 elements.

Which statement correctly explains why water does **not** fit the trend of the other compounds?

- A There are fewer electrons in the oxygen atoms so there is less shielding of the nuclear charge.
- B There are strong hydrogen bonds in water but **not** in the other compounds.
- C The covalent bonds in water are much stronger than in the other compounds.
- D The water molecules are smaller and so have stronger van der Waals' forces.

- 9 An energy cycle is shown.

The energy changes involved are X, Y and Z.

The numerical value of energy change Y is either -890 or +890.

The numerical value of energy change Z is either -964 or +964.

Which of the three values are negative?

- A X and Z      B X only      C Y and Z      D Y only

- 13** An alcohol, ROH, reacts reversibly with ethanoic acid to produce an ester.

3.0 mol of ROH, 2.0 mol of ethanoic acid and 1.0 mol of water are mixed together. At equilibrium, 1.5 mol of CH<sub>3</sub>COOR is present.

What is the value of the equilibrium constant,  $K_c$ , for this reaction?

- A** 0.20                      **B** 0.25                      **C** 2.00                      **D** 5.00

- 14** Graphs can be drawn to show the percentage of ammonia at equilibrium when nitrogen and hydrogen are mixed at different temperatures and pressures.

Which diagram correctly represents these two graphs?

- 15** The Boltzmann distribution for the hydrogenation of an alkene at a particular temperature in the absence of a catalyst is shown.

Which row correctly describes the effects of adding a nickel catalyst to the reaction vessel?

	the shape of the Boltzmann distribution	activation energy, $E_a$
<b>A</b>	changes	decreases
<b>B</b>	changes	increases
<b>C</b>	does <b>not</b> change	decreases
<b>D</b>	does <b>not</b> change	increases

- 16** Elements Y and Z are both in Period 3 of the Periodic Table.

When the chloride of element Y is added to water, it reacts and a solution of pH 2 is produced.

When the chloride of element Z is added to water, it dissolves and a solution of pH 7 is produced.

Which statement explains these observations?

- A** Both chlorides hydrolyse in water.
- B** Element Y is magnesium and element Z is sodium.
- C** Element Y is phosphorus and element Z is aluminium.
- D** Element Y is silicon and element Z is sodium.

- 17** Aluminium, silicon and phosphorus are elements in Period 3 of the Periodic Table. Each element forms an oxide.

Which row is correct?

	$Al_2O_3$	$SiO_2$	$P_4O_{10}$
<b>A</b>	basic	amphoteric	acidic
<b>B</b>	giant ionic	giant ionic	simple molecular
<b>C</b>	high melting point	high melting point	low melting point
<b>D</b>	vigorous reaction with water	slight reaction with water	vigorous reaction with water

**18** Which statement is correct?

- A** The atomic radius of silicon is larger than that of aluminium.
- B** The boiling point of chlorine is higher than that of silicon.
- C** The first ionisation energy of sulfur is greater than that of phosphorus.
- D** The electrical conductivity of magnesium is greater than that of sodium.

**19** All solubility data in this question is given at the same temperature.

The table gives some data for compounds of calcium and for compounds of X, an unidentified element in Group 2.

element	decomposition temperature of carbonate / °C	solubility of sulfate / mol per 100 g of water	solubility of hydroxide / mol per 100 g of water
Ca	840	$4.66 \times 10^{-3}$	$1.53 \times 10^{-3}$
X	1150		

What is the missing data for element X?

	solubility of sulfate / mol per 100 g of water	solubility of hydroxide / mol per 100 g of water
<b>A</b>	$7.11 \times 10^{-5}$	$2.00 \times 10^{-5}$
<b>B</b>	$7.11 \times 10^{-5}$	$3.37 \times 10^{-3}$
<b>C</b>	$1.83 \times 10^{-1}$	$2.00 \times 10^{-5}$
<b>D</b>	$1.83 \times 10^{-1}$	$3.37 \times 10^{-3}$

**20** What is the total volume of gas produced, measured at room conditions, when 0.010 mol of anhydrous magnesium nitrate is completely decomposed by heating?

- A** 240 cm<sup>3</sup>      **B** 480 cm<sup>3</sup>      **C** 600 cm<sup>3</sup>      **D** 720 cm<sup>3</sup>

- 21** A solid sodium halide, NaX, is reacted with concentrated sulfuric acid. The **lowest** oxidation state of sulfur in the products is +4.

Halogen Y<sub>2</sub> is less volatile than halogen X<sub>2</sub>.

What are the identities of sodium halide NaX and halogen Y<sub>2</sub>?

	sodium halide NaX	halogen Y <sub>2</sub>
<b>A</b>	sodium bromide	chlorine
<b>B</b>	sodium bromide	iodine
<b>C</b>	sodium iodide	bromine
<b>D</b>	sodium iodide	astatine

- 22** Compound Q dissolves in water. Q(aq) does **not** react with dilute sulfuric acid.

Q(aq) forms a precipitate when aqueous silver nitrate is added. This precipitate is partially soluble in aqueous ammonia.

What could be compound Q?

- A** barium bromide
- B** barium iodide
- C** magnesium bromide
- D** magnesium iodide

- 23** Nitrogen dioxide is a gas that contributes to air pollution. It is produced in internal combustion engines.

Which statement is correct?

- A** Nitrogen dioxide acts as a catalyst in the atmospheric oxidation of sulfur dioxide to sulfur trioxide.
- B** Nitrogen dioxide reacts to form nitrogen monoxide in the catalytic converter of a car exhaust system.
- C** PAN forms when nitrogen dioxide reacts with the gases formed by complete combustion of the fuel.
- D** Under high pressure in an internal combustion engine, nitrogen dioxide forms from impurities in the fuel.

- 24** What is the bond angle in the ammonium ion?

- A** 90°
- B** 107°
- C** 109.5°
- D** 120°

**25** Structural isomerism and stereoisomerism should be taken into account when answering this question.

The structure of 3-methylcyclobutene is shown.

3-methylcyclobutene

A mixture containing all stereoisomers of 3-methylcyclobutene is treated with HBr. This produces a mixture of isomeric bromomethylcyclobutanes.

How many stereoisomers does 3-methylcyclobutene have, and how many isomeric bromomethylcyclobutanes are present in the product mixture?

	3-methylcyclobutene	bromomethylcyclobutanes
<b>A</b>	2	4
<b>B</b>	2	6
<b>C</b>	4	4
<b>D</b>	4	8

**26** The diagram shows the structure of X.

Which row is correct?

	number of $\sigma$ bonds in X	type of hybridisation of the carbon atoms in X
<b>A</b>	4	$sp$ and $sp^2$
<b>B</b>	4	$sp^2$ and $sp^3$
<b>C</b>	6	$sp$ and $sp^2$
<b>D</b>	6	$sp^2$ and $sp^3$

**27** The diagram shows the skeletal formula of citric acid.

citric acid

What is the molecular formula of citric acid?

- A**  $\text{C}_6\text{H}_8\text{O}_7$       **B**  $\text{C}_6\text{H}_4\text{O}_7$       **C**  $\text{C}_8\text{H}_8\text{O}_7$       **D**  $\text{C}_{10}\text{H}_8\text{O}_7$

**28** Which reaction occurs when ethane and chlorine are mixed in diffused sunlight?

- A** a free-radical substitution with hydrogen given off
- B** a free-radical substitution with hydrogen chloride given off
- C** a free-radical substitution with no gas given off
- D** a nucleophilic substitution with hydrogen chloride given off

**29** A molecule of geraniol is shown.

geraniol

What is formed when geraniol is reacted with an excess of cold dilute acidified  $\text{MnO}_4^-$ ?

- A**

- B**

- C**

- D

**30** Q is either a primary or a tertiary halogenoalkane. Q undergoes hydrolysis with aqueous sodium hydroxide.

The first step in the mechanism of this reaction involves two species reacting together.

Which row is correct?

	Q	behaviour of hydroxide ion
<b>A</b>	primary halogenoalkane	electrophile
<b>B</b>	primary halogenoalkane	nucleophile
<b>C</b>	tertiary halogenoalkane	electrophile
<b>D</b>	tertiary halogenoalkane	nucleophile

**31** 2-bromopropane is converted to 1,2-dibromopropane in a pathway involving two reactions.

What are the reagents and conditions for the two reactions?

	reaction 1	reaction 2
<b>A</b>	heat under reflux with aqueous NaOH	HBr(g) at room temperature
<b>B</b>	heat under reflux with aqueous NaOH	Br <sub>2</sub> (l) at room temperature
<b>C</b>	heat under reflux with ethanolic NaOH	HBr(g) at room temperature
<b>D</b>	heat under reflux with ethanolic NaOH	Br <sub>2</sub> (l) at room temperature

**32** Compound X is a single, pure, optical isomer. Compound X is heated with an excess of concentrated H<sub>2</sub>SO<sub>4</sub>. Only **one** organic product is formed.

What is compound X?

**33** Which reagents could be used to form 2-bromobutane from butan-1-ol?

- A** bromine and ultraviolet light
- B** concentrated sulfuric acid with potassium bromide, under reflux
- C** concentrated sulfuric acid followed by bromine
- D** concentrated sulfuric acid followed by hydrogen bromide
